

GIS Technician

Come work at a rapidly growing engineering firm that is staffed with industry experts, has great benefits, and prides itself on developing our people.

The Company

Planview Utility Services is an engineering firm that provides engineering design, sub-surface investigation and GIS services to telecommunication, gas, electric utilities and the utility industry at large. Our workforce is a mix of veterans of the industry and youthful enthusiastic technical resources. We have pride in our collegial culture and host multiple regular corporate sponsored social activities. Our embrace of the use of technology plays a large part in our success.

The Position

GIS Technician will be required to use their skillsets to contribute and innovate on a variety of projects and programs. The responsibilities can vary from dynamic requirements and projects to consistent programs that require support and development.

This position is an office based position with little to no field work, but the possibility of out of office meetings. The team is a very skillful group and the requirements from everyone shifts according to need.

Responsibilities

- Reports to the GIS Solutions Manager
- Working with daily project loads and dynamic issues or changes to existing programs
- Development of new projects and programs through individual and team efforts
- Work with project coordinators and other technical staff to complete tasks of varying skill levels
- Use of FME, ArcMap, SQL Server, Oracle, Geoserver, Postgres, and Automate, is a potential
- Executing daily processes and ensuring a high level of quality control
- Attending to the details of existing programs in order to complete regular maintenance and business processes
- Reporting required details such as issues, deviations from the norm, or client and user problems to the program coordinator or other technical staff
- Time management skillsets are a great asset
- Time requirement projections on workloads are expected to help maintain delivery dates for all projects
- Ongoing innovation and creativity in solving problems or enhancing existing programs and processes

Requirements

- GIS post-grad certification or equivalent education and experience
- Any Utility GIS industry experience is an asset
- Working knowledge of ArcMap
- Experience with Geodatabase (SQL, Oracle, Postgres)
- Experience with FME is an asset
- Ability with Javascript or web programming is an asset
- Geoserver experience is an asset
